

Endress+Hauser on further path to growth

Production of level and pressure measurement technology in Maulburg expanded

Endress+Hauser has invested roughly 46 million euros in the expansion of its Maulburg, Germany location. The project, which took nearly two years to complete, includes a new production and office building with more than 17,000 square feet of space, plus a parking garage. The expansion was in response to strong growth in the area of level and pressure measurement technology.

With roughly 2,000 employees, Maulburg is one of the Endress+Hauser Group's largest locations. "The new buildings will allow us to cope with the growth stemming from previous years," said Dr Peter Selders, Managing Director of Endress+Hauser Level+Pressure in Maulburg at the dedication of the new facilities. A generous amount of space and a modern infrastructure will help meet the demand for quality and efficiency.

Sustainable building technology

The new multistory building was completed in 2020 and contains 17,000 square feet of space, 11,000 of which is dedicated to production. The design placed considerable value on energy efficiency and features a photovoltaic system on the roof and a cogeneration unit that supplies electricity and heat. Endress+Hauser measurement technology monitors the flow of energy. The Maulburg campus also boasts a new, nearly 17,000-square-foot parking garage with 700 parking spaces.

Highly precise calibration

Still under construction in the basement of the new building are two measurement sections that will be used for the precise calibration of level measurement instruments with radar technology employed in large tanks and silos. At 55 meters each, these measurement sections are the longest of their kind in the world. Customers have a keen interest in calibration given that the smallest measurement deviations can lead to a high degree of uncertainty when monitoring inventories.

Dedication ceremony

The new buildings were officially dedicated in a small gathering on Friday 8 October 2021 in the presence of guests from government and industry, business partners and employees. Although the spaces were occupied in early 2020 after construction was completed, the dedication ceremony was delayed until now due to the coronavirus pandemic. "Over the past year we shifted a lot of things to the virtual environment, but we wanted to celebrate the opening together with people here in our new building, albeit in a small group due to the Covid restrictions," emphasized Peter Selders.

As a symbol of sound cooperation, Matthias Altendorf unveiled a mural from German artist Britta Schmidhauser as a gift for the Maulburg location that consists of multicolored rectangles made from fused glass. “If one of the rectangles was missing, the picture would be incomplete,” said the CEO of the Group during the handover of the artwork. “This idea is easily transferred to various Endress+Hauser locations around the world and also applies to all employees.”

The Endress+Hauser Group

Endress+Hauser is a global leader in measurement and automation technology for process and laboratory applications. The family company, headquartered in Reinach, Switzerland, achieved net sales of approximately 2.6 billion euros in 2020 with a total workforce of more than 14,000.

Endress+Hauser devices, solutions and services are at home in many industries. Customers thus use them to gain valuable knowledge from their applications. This enables them to improve their products, work economically and at the same time protect people and the environment.

Endress+Hauser is a reliable partner worldwide. Its own sales companies in 50 countries as well as representatives in another 70 countries ensure competent support. Production facilities on four continents manufacture quickly and flexibly to the highest quality standards.

Endress+Hauser was founded in 1953 by Georg H Endress and Ludwig Hauser. Ever since, the company has been pushing ahead with the development and use of innovative technologies, now helping to shape the industry's digital transformation. 8,900 patents and applications protect the Group's intellectual property.
